

SAFARI LODGE & MOBILE TENTED CAMPS · ARUSHA / SERENGETI, TANZANIA

Into Wild Africa Luxury Safari

Prepared for Managing Director / Reservations

International safari inquiries in Arusha are bypassing your direct site because AI search engines lack structured entity markup for Into Wild Africa.

EST. COMMISSION BLEED \$3,600 /mo Handed to OTAs, every month	PROJECTED OVER 12 MONTHS \$43,200 If nothing changes this year	DIRECT-BOOKING RECOVERY \$1,250–2,000 /mo Realistic first-year lift
---	--	---

01 The AI search visibility gap

We asked ChatGPT, Claude, and Perplexity the question your future guests ask:

> “best luxury safari lodges in Arusha for a private trip”

Missing JSON-LD Lodging Schema; Perplexity cites international aggregators when asked for authentic Tanzania bush camps. The assistants named **international OTAs and aggregator directories** — not your direct site. High-intent international travellers planning by AI are routed straight to the platforms, at 15–25% commission on every booking.

02 What the commission is costing you

Industry OTA commissions run 15–25% (roughly 18% on average, charged on the VAT-inclusive rate). Against Into Wild Africa Luxury Safari's room and rate profile that is an estimated **\$3,600 a month** — about **\$43,200** over a year — on bookings that could arrive direct. These are estimates from public rate and occupancy benchmarks, not a promise; we confirm the real figure with you on the call.

03 Google Business Profile & schema deficits

- No LodgingBusiness / TouristAttraction JSON-LD on the site — AI crawlers and Google cannot read your rooms, rates, or amenities.
- The assistants answer travel questions for your area without ever naming your direct site — every answer routes the guest to an OTA.
- No direct-booking intent pages exist for the searches that end in a reservation, so the OTAs keep the head terms uncontested.

04 The 3-step recovery roadmap

1 Inject Lodging & safari entity schema and allowlist the AI crawlers (GPTBot, PerplexityBot, ClaudeBot) so ChatGPT, Claude, and Perplexity can read and cite you by name.	2 Rebuild your Google Business Profile taxonomy — primary and secondary categories (Hotel, Lodging, plus your niche categories) — to claim a top-3 Local Pack spot.	3 Publish direct-booking intent pages for the searches guests actually run, so the reservation lands with you instead of the platform.
