

PREMIER KENYA SAFARI TOUR OPERATOR · NAIROBI & DIANI BEACH, KENYA

Natural World Kenya Safaris

Prepared for Director of Safari Operations

Natural World has exceptional Google rankings, but the new wave of AI trip planners on ChatGPT and Perplexity are giving safari leads to broker sites.

EST. COMMISSION BLEED

\$4,500 /mo

Handed to OTAs, every month

PROJECTED OVER 12 MONTHS

\$54,000

If nothing changes this year

DIRECT-BOOKING RECOVERY

\$1,600–2,500 /mo

Realistic first-year lift

01 The AI search visibility gap

We asked ChatGPT, Claude, and Perplexity the question your future guests ask:

> “top private safari tour operators in Nairobi & Diani Beach”

High SEO authority on traditional Google, but Perplexity cites international aggregators for customized Kenya safari itineraries. The assistants named **international OTAs and aggregator directories** — not your direct site. High-intent international travellers planning by AI are routed straight to the platforms, at 15–25% commission on every booking.

02 What the commission is costing you

Industry OTA commissions run 15–25% (roughly 18% on average, charged on the VAT-inclusive rate). Against Natural World Kenya Safaris’s room and rate profile that is an estimated **\$4,500 a month** — about **\$54,000** over a year — on bookings that could arrive direct. These are estimates from public rate and occupancy benchmarks, not a promise; we confirm the real figure with you on the call.

03 Google Business Profile & schema deficits

- The assistants answer travel questions for your area without ever naming your direct site — every answer routes the guest to an OTA.
- No direct-booking intent pages exist for the searches that end in a reservation, so the OTAs keep the head terms uncontested.
- Listings and rates are inconsistent across the web, so AI engines cannot confirm what and where you are.

04 The 3-step recovery roadmap

1

Inject Lodging & safari entity schema and allowlist the AI crawlers (GPTBot, PerplexityBot, ClaudeBot) so ChatGPT, Claude, and Perplexity can read and cite you by name.

2

Rebuild your Google Business Profile taxonomy — primary and secondary categories (Tour Operator, Eco Tour Agency, Safari Park) — to claim a top-3 Local Pack spot.

3

Publish direct-booking intent pages for the searches guests actually run, so the reservation lands with you instead of the platform.

NEXT STEP

A 15-minute walkthrough of your direct-booking fix

We'll screen-share the live AI answers for your area, the Google Local Pack gaps, and the schema fixes — then show you exactly what changes and in what order. No lock-in, prices published.
