

GORILLA & PRIMATE SAFARI TOUR OPERATOR • KIGALI, RWANDA

Rwanda Safaris (Primate Experiences)

Prepared for Managing Director / Tour Planner

Rwanda Safaris is losing gorilla permit package bookings to overseas travel brokers because your itineraries lack AI entity schemas.

EST. COMMISSION BLEED \$4,100 /mo Handed to OTAs, every month	PROJECTED OVER 12 MONTHS \$49,200 If nothing changes this year	DIRECT-BOOKING RECOVERY \$1,450 -2,250 /mo Realistic first-year lift
---	--	---

01 The AI search visibility gap

We asked ChatGPT, Claude, and Perplexity the question your future guests ask:

> "best gorilla trekking lodges in Kigali"

Perplexity returns third-party aggregator directories for Volcanoes gorilla permits; direct local operator omitted. The assistants named **international OTAs and aggregator directories** — not your direct site. High-intent international travellers planning by AI are routed straight to the platforms, at 15–25% commission on every booking.

02 What the commission is costing you

Industry OTA commissions run 15–25% (roughly 18% on average, charged on the VAT-inclusive rate). Against Rwanda Safaris (Primate Experiences)'s room and rate profile that is an estimated **\$4,100 a month** — about **\$49,200** over a year — on bookings that could arrive direct. These are estimates from public rate and occupancy benchmarks, not a promise; we confirm the real figure with you on the call.

03 Google Business Profile & schema deficits

- The assistants answer travel questions for your area without ever naming your direct site — every answer routes the guest to an OTA.
- No direct-booking intent pages exist for the searches that end in a reservation, so the OTAs keep the head terms uncontested.
- Listings and rates are inconsistent across the web, so AI engines cannot confirm what and where you are.

04 The 3-step recovery roadmap

1 Inject Lodging & safari entity schema and allowlist the AI crawlers (GPTBot, PerplexityBot, ClaudeBot) so ChatGPT, Claude, and Perplexity can read and cite you by name.	2 Rebuild your Google Business Profile taxonomy — primary and secondary categories (Tour Operator, Eco Tour Agency, Safari Park) — to claim a top-3 Local Pack spot.	3 Publish direct-booking intent pages for the searches guests actually run, so the reservation lands with you instead of the platform.
