

CUSTOM SAFARI & WILDLIFE TOUR AGENCY · WINDHOEK, NAMIBIA

Mannor Safaris Namibia

Prepared for Founder / Lead Guide

Mannor Safaris has expert wildlife knowledge, but AI search engines cannot read your itineraries without GEO structured data.

EST. COMMISSION BLEED

\$2,800 /mo

Handed to OTAs, every month

PROJECTED OVER 12 MONTHS

\$33,600

If nothing changes this year

DIRECT-BOOKING RECOVERY

\$1,000–1,550 /mo

Realistic first-year lift

01 The AI search visibility gap

We asked ChatGPT, Claude, and Perplexity the question your future guests ask:

> “top private safari tour operators in Windhoek”

Missing structured entity markup for wildlife itineraries; absent from ChatGPT top recommendations. The assistants named **Booking.com** and **international aggregators** — not your direct site. High-intent international travellers planning by AI are routed straight to the platforms, at 15–25% commission on every booking.

02 What the commission is costing you

Industry OTA commissions run 15–25% (roughly 18% on average, charged on the VAT-inclusive rate). Against Mannor Safaris Namibia's room and rate profile that is an estimated **\$2,800 a month** — about **\$33,600** over a year — on bookings that could arrive direct. These are estimates from public rate and occupancy benchmarks, not a promise; we confirm the real figure with you on the call.

03 Google Business Profile & schema deficits

- No LodgingBusiness / TouristAttraction JSON-LD on the site — AI crawlers and Google cannot read your rooms, rates, or amenities.
- The assistants answer travel questions for your area without ever naming your direct site — every answer routes the guest to an OTA.
- No direct-booking intent pages exist for the searches that end in a reservation, so the OTAs keep the head terms uncontested.

04 The 3-step recovery roadmap

1

Inject Lodging & safari entity schema and allowlist the AI crawlers (GPTBot, PerplexityBot, ClaudeBot) so ChatGPT, Claude, and Perplexity can read and cite you by name.

2

Rebuild your Google Business Profile taxonomy — primary and secondary categories (Tour Operator, Eco Tour Agency, Safari Park) — to claim a top-3 Local Pack spot.

3

Publish direct-booking intent pages for the searches guests actually run, so the reservation lands with you instead of the platform.

NEXT STEP

A 15-minute walkthrough of your direct-booking fix

We'll screen-share the live AI answers for your area, the Google Local Pack gaps, and the schema fixes — then show you exactly what changes and in what order. No lock-in, prices published.
